

- Provides light and airy conditions which suit a wide variety of flying or crawling insects.
- Suitable for use indoors or outdoors, with excellent viewing properties.
- Lightweight and portable, this cage is also useful for travel, as temporary accommodation for a wide range of insects on cut plants placed inside the cage.
- Can be used with small growing plants in pots, or with artificial feeders.
- Cage frame is made of rust resistant materials and can be easily assembled and disassembled.
- Has a practical vertical access, useful for general maintenance or photography.
- Net cover is washable and replaceable.

## Contents

1 x net cover   4 x 10" ring sections   2 x legs   4x anchors   4x 12mm screws

## Frame Assembly

1. Remove the screw and anchors from the straight legs and use them to join the curved wire sections to form two separate rings. Firmly 'hand-tight' is good enough as over-tightening may cause damage or distortion.
2. Re-fit the anchors on the legs, with the completed ring assembly.

## Fitting the Cover

1. Pull the stud anchor and ring assembly back off the legs.
2. Open the zip on the net, and hold the net cover open.
3. Place the two completed rings inside the net.
4. Hold the topmost ring and gently stretch the cover. Insert the first leg into the bottom anchor, and then into the top anchor.
5. Repeat for the other leg(s).
6. Take care that you do not poke the legs into the netting, or trap the netting in the anchors.

## Care of the Frame and Net

- Over time our fabrics will be affected by UV rays and sunlight. When not in use disassemble and store in a cool, dry, dark place; this will maximise the life of your product. Ensure all parts are clean and dry before packing away.
- The product may be hand washed in warm (not hot) water with a mild detergent. Ensure it is thoroughly rinsed after washing. To sterilise against disease, use sterilising tablets or liquid (for example Milton®) prepared and used as per the manufacturer's instructions. Afterwards, rinse thoroughly with clean water. Repeated sterilisation may cause some minor bleaching of black net over time. Allow to air dry. Do not tumble dry. Do not iron.
- Some chemicals including phenols, alkalis, iodine and acids are likely to damage our products. This is not an exhaustive list, so if you plan to use any chemicals with our products we recommend you check a sample with the test netting we have enclosed with your order. Chemical damage can sometimes take significant time to develop and may not be immediately obvious to the naked eye.
- Predatory or aggressive species may be encountered which are capable of chewing, biting, tearing or otherwise damaging the textile(s) of which this product is made. Wherever possible, site to minimise or remove this risk.
- If small holes are accidentally made in the fabric, a temporary repair may be made in-situ using adhesive tape pressed onto both sides of the hole. Minor damage can be repaired later by hand darning. More significant damage will require patching.
- Whilst every care is taken to ensure the surface of our plastic-coated wire is smooth, before use we recommend that you check the ring sections and legs. If necessary, any rough areas can easily be smoothed down with fine-grade sandpaper or an emery board.
